Virtual Training Delivery

Virtual Training blends the benefits of Instructor-Led training with the convenience of a virtual, online classroom. This is the most effective approach to hands-on training for a geographically diverse student population. Students participate in training through an easy-to-use web application. Classes include lectures, demonstrations, and hands-on virtual labs taught by our highly-qualified and experienced instructors.

LearnQuest's hosted virtual lab environment supports the delivery of virtual training. A robust and scalable data center releases preconfigured student images containing all of the necessary software, data, and files needed for the class. By leveraging Hosted Labs, students experience true hands-on training without the need for any local software setup. LearnQuest instructors can remotely monitor and access student lab machines to provide guidance and support, as if, similarly, the instructor was walking around the room in a traditional computer lab environment.

Premier Business Partner — **IBM**
Authorized Training
Global Training Provider

Virtual training provides numerous benefits including:

- Increased flexibility in scheduling
- Cost savings – by eliminating all
- instructor and student travel
- No local software setup or installation required
- Browser based access, with minimal PC hardware/software requirements

- Students and instructors communicate via VOIP or telephone bridge
- Collaborate and network with geographically dispersed colleagues and peers
- Choose the LearnGreen option to derive further benefits and paperless courseware
